

Vulkollan®

Stellana

HEXAGON POLYMERS

Vulkollan® quality from Stellana

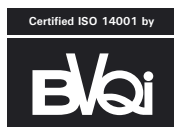

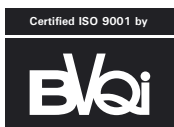

Vulkollan on metal provides an extremely strong bond and can be used when demands on wear resistance, elasticity, resistance to abrasion, durability and low rolling resistance are crucial and where other materials cannot satisfy similar demands.

One unique property of Vulkollan is its load bearing capacity that enables it to withstand greater loads than any other polyurethane and standard solid-rubber wheels.

Further advantages of Vulkollan are its good dynamic properties and high elasticity. This reduces the risk of settlement and high relaxation. The risk of flat spots at high speeds and heavy loads is thereby minimized.

Stellana AB is licensed by Bayer AG in Germany and has been approved to manufacture Vulkollan wheels since the early sixties. Since then, the company is one of the leading suppliers of Vulkollan wheels to industrial truck manufacturers and has worked in close co-operation with customers with regard to optimizing the design of wheels for every specific customer requirement.

In addition to Vulkollan wheels and rollers, Stellana also offers the same dimensions made in Powerthane and Powerfriction.
